# Halatlar Hakkında Önemli Bilgiler

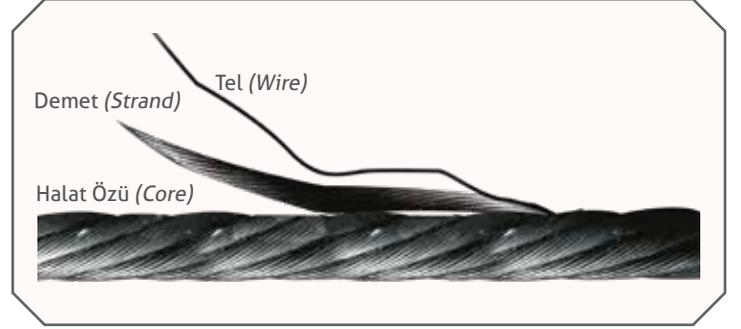

## Important Things About Steel Wire Rope

### Halatın Bileşenleri

#### Wire Rope Components

1. Demetleri meydana getiren teller
2. Bir öz etrafında helisel olarak sarılmış demetler
3. Halatın merkezinde, demetlere destek görevini yapan öz şeklindedir.

1. Wires forming the strand
2. Strands laid helically around a core
3. A core supporting the strands

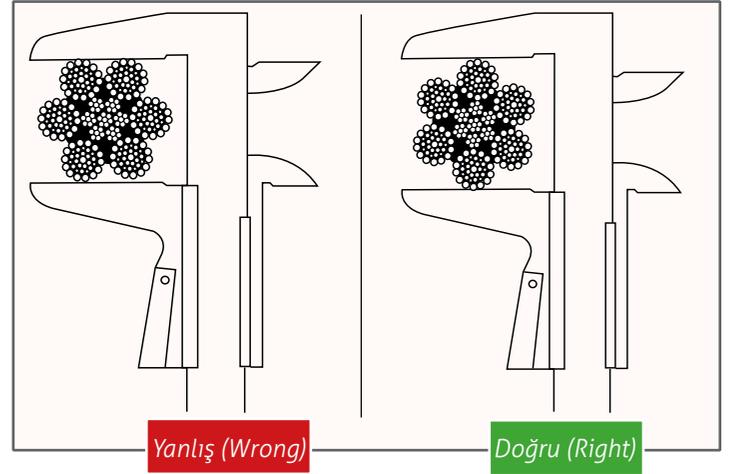

### Halat çapı ölçümü

#### Measurement of the Diameter of Steel Wire Rope

Halat çapı, halat dış tel ve demetlerini çevreleyen ve tüm halat kesitini içine alan çemberin çapıdır. Halat çapı ölçümünde ölçü cihazı çenelerinin mutlaka en dış iki demete teması gereklidir.

*The diameter of the steel wire rope encircles the outer wires and strands including the cross section. The measuring device must touch two strands.*

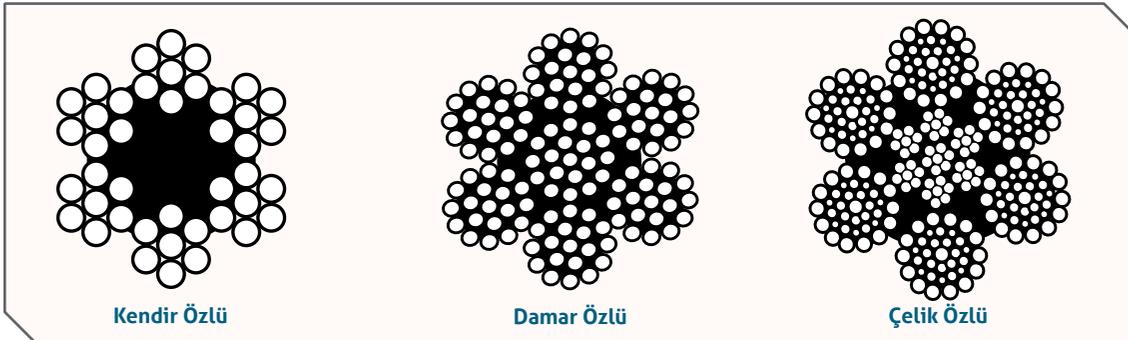

### Halatın Özü

#### Wire Rope Core

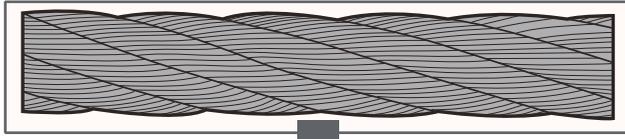

Halatlar Kendir öz, Çelik öz ve Damar öz olarak 3 gruba ayrılmaktadır.

*Wire Ropes are divided into 3 different groups; Fiber core, Strand core and Steel core.*

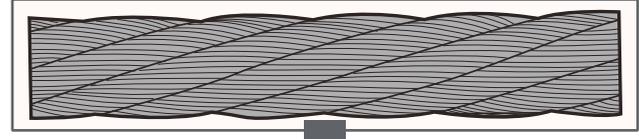

## Halat Sarım Yönü ve Tambur Bağlantıları

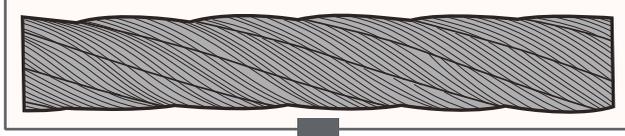

Direction of Wire and Strand Helix

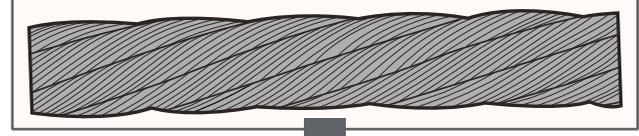

**Sağ Çapraz Sarım**  
Right Hand Regular Lay (RHRL/RHO/zS)

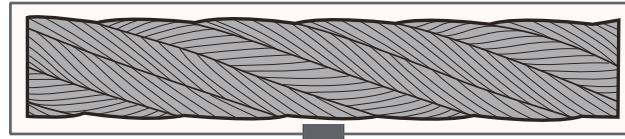

**Sol Çapraz Sarım**  
Left Hand Regular Lay (LHRL/RHO/zS)

**Sağ Düz Sarım**  
Right Hand Langs Lay (RHLL/RHL/zS)

**Sol Düz Sarım**  
Left Hand Langs Lay (LHLL/LHL/zS)

**Alternatif Sarım**  
Special Alternate Lay (2 Langs 1 Regular)

## Halatların Tambura Sabitlenmesi ve Sarılması

Spooling/Anchorage of Rope on Drum

Halatlar sıfır iç gerilme ile üretilmektedir.

Tambur üzerinde düzensiz sarım işlemi, iç gerilmeleri artırır. Bu durumda halatın ömrü kısalmır.

- A. Üstten sarım - soldan sağa - Sağ sarım halat kullanılmalıdır.
- B. Alttan sarım - sağdan sola - Sağ sarım halat kullanılmalıdır.
- C. Üstten sarım sağdan sola - Sol sarım halat kullanılmalıdır.
- D. Alttan sarım - soldan sağa - Sol sarım halat kullanılmalıdır.

*Wires are produced with no inner stress.*

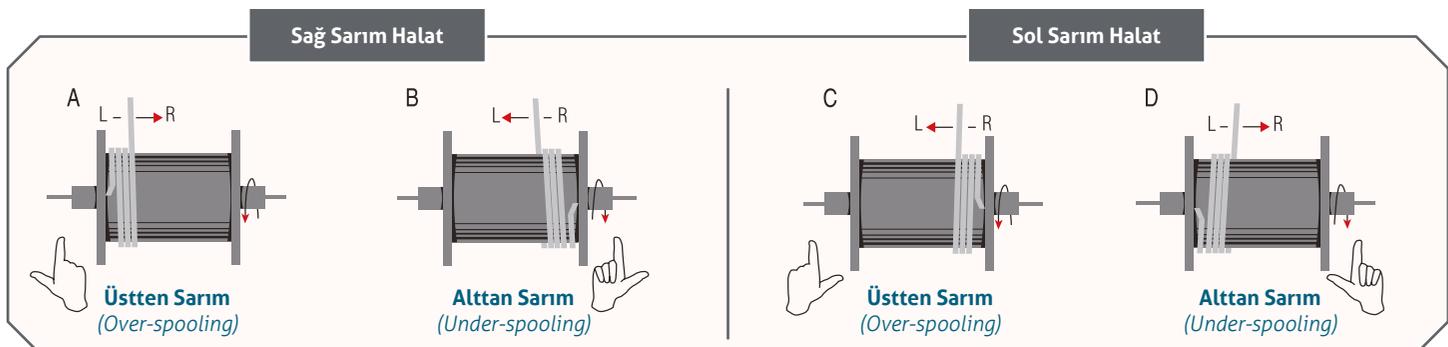

*Inappropriate spooling causes stress and decreases life time of the wire.*

*Right hand regular lay - Over-spooling should be right to left.*

*Right hand regular lay - Under-spooling should be left to right.*

*Left hand regular lay - Over-spooling should be right to left.*

*Left hand regular lay - Under-spooling should be left to right.*

## Halat Kompozisyonları ve Tambur Oranları

Steel Wire Rope Compositions and Pulley Ratios

## İdeal Yiv Açıklığı

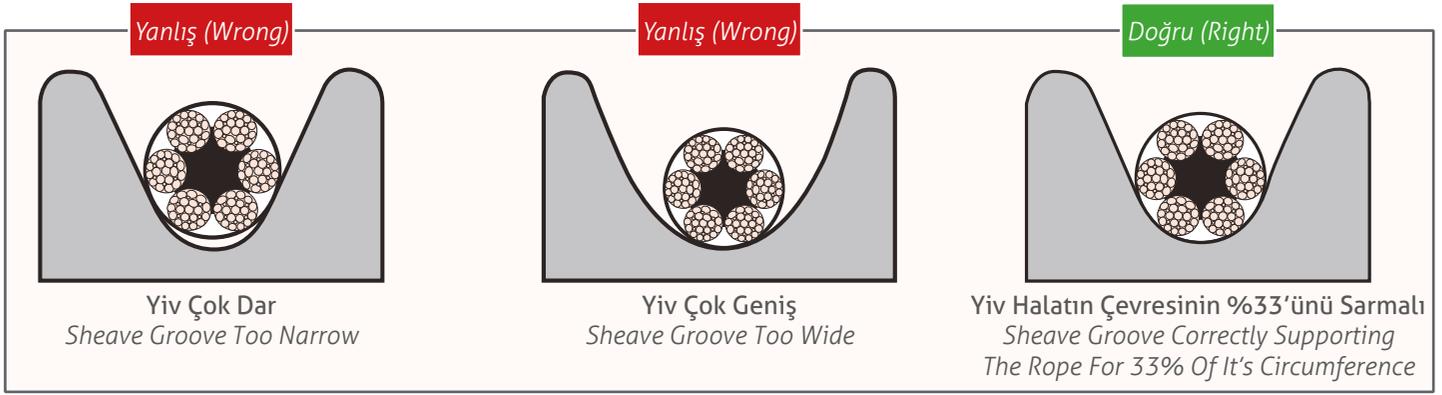

## Ideal Pulley Groove

Halat ve yiv arasındaki temas yüzeyi arttıkça, aşınma azalır ve halatın servis ömrü artar. Halat yuvası çapı, çap mastarı kullanılarak ölçülür.

Halat toleransı %5 olarak düşünüldüğünde açılmış olan yivlerin min. halat anma çapından %5 daha büyük olması gerekmektedir.

Yiv toleransı ise max %5'dir.

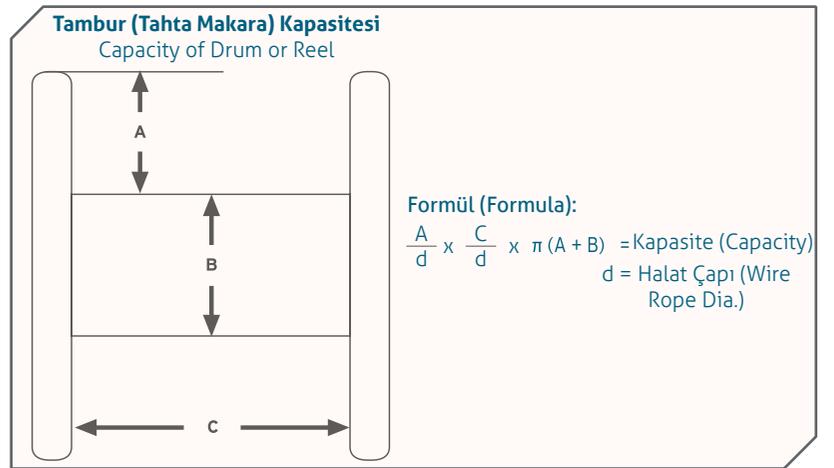

*Greater contact area between the rope and the pulley reduces abrasion and increases service life of rope. The diameter of the groove is measured with diameter straightedge. If wire rope tolerance is considered 5% the ideal open chase groove should be 5% greater than the minimum nominal diameter of the rope. The maximum groove tolerance is 5%.*

## Tambur - Halat Çapı Oranları

## Drum Rope Diameter Ratio

Const.	Optimized D/d	Min. D/d
6x7	72	42
19x7, 18x7	51	34
6x19 S	51	34

## Sapma Açısı

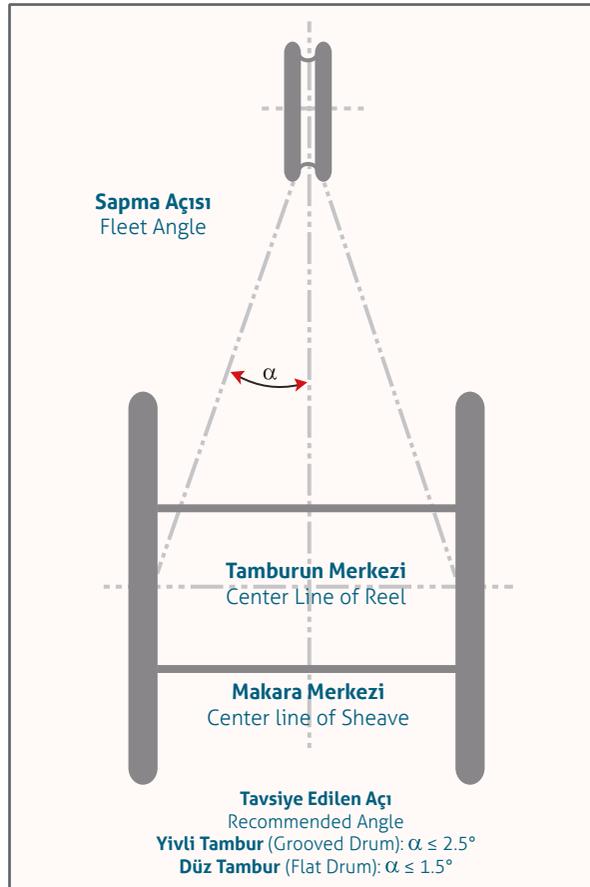

### Fleet Angle

Sapma Açısı: Yiv merkezinden tambur flanşına ve tambur merkezine dik olarak çizilen iki çizgi arasındaki açıdır. Sağ ve sol olmak üzere iki çeşit sapma açısından bahsedilebilir. Bu açıların, belirtilen tolerans değerleri içerisinde olması istenir. Aksi durumda halatın kullanım ömrünü olumsuz etkiler.

Çalışma verimi ve halat ömrünün arttırılması için, sapma açısının düz tamburlarda  $1,5^\circ$  yivli tamburlarda ise  $2,5^\circ$  aşmaması gerekir.

*Fleet Angle is the angle shown by the perpendicular line that goes from the center of the chase to the drum flange and the drum center. Categorized as left and right. The angle is expected to be in the recommended tolerance rates. Otherwise it affects the wire rope's service life adversely.*

*In order to increase the performance and service life of wire-rope, fleet of angle should be  $1,5^\circ$  on flat drums, and should not be more than  $2,5^\circ$  on grooved drums.*

## Halatların Yağlanması

### Lubrication of Wire Rope

Çelik halatlar genelde imalat esnasında yağlanmakla birlikte imalat sırasındaki bu yağlama halatların çalışma koşullarında uzun süre korunmaları için yeterli değildir. Bu sebeple bakımları esnasında halatlar kontrol edilerek yağlanmalıdır.

*Steel wire ropes are lubricated during production. However it is not sufficient for long term use. Therefore it should be inspected during maintenance and lubricated if necessary.*

## Halatları Yağlamanın Faydaları

### Advantages of Lubrication

1. Aşınmayı önlemek.
  2. Kullanım ömrünü uzatmak.
  3. Korozyona karşı korumak.
  4. Çalışma esnasında tel ve demetlerin birbiri üzerinde düzgün olarak kaymalarını sağlamak.
1. *Preventing from abrasion.*
  2. *Increasing life time.*
  3. *Protecting against corrosion.*
  4. *Providing better slide of wires and strands during work.*

## Halatların Depolanması

### Storing Wire Ropes

Halatlar kuru, temiz ve güneş ışığına maruz kalmayacak şekilde saklanmalıdır. Halatlar kısa süreliğine dışarıda saklanacaksa; makaralar örtülerek, makara altından hava akımı alabilecek şekilde stoklanmalıdır.

*Wherever possible, ropes should be stored on pallets in places that are clean, dry, and protected against strong solar radiation. If ropes are stored outdoors for a short term, the plastic foil covers should be checked for condensation and the ingress of air at regular intervals.*

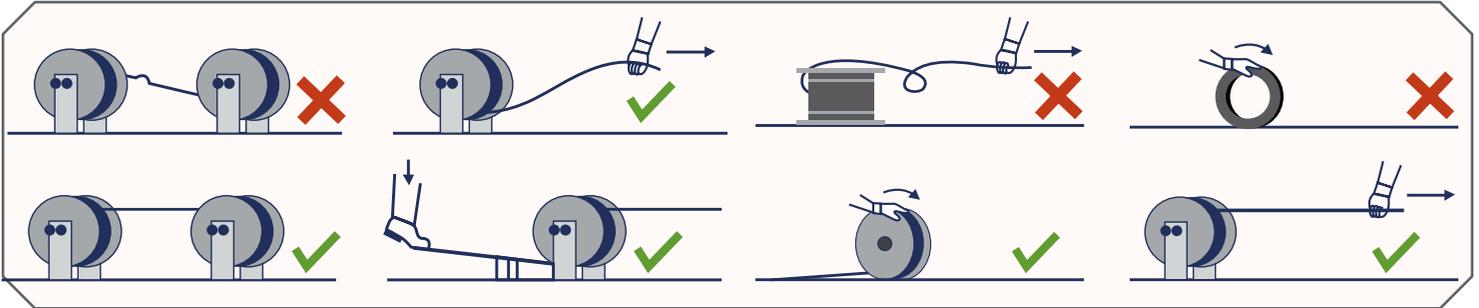

## Halat Aktarma ve Sarım Şekilleri

### Recoiling and Spooling of Wire Ropes

Halatın hasarlanmaması için belirtilen şekillere uygun aktarma yapılmalıdır.

*Should be rolled as the figure right to prevent damages.*

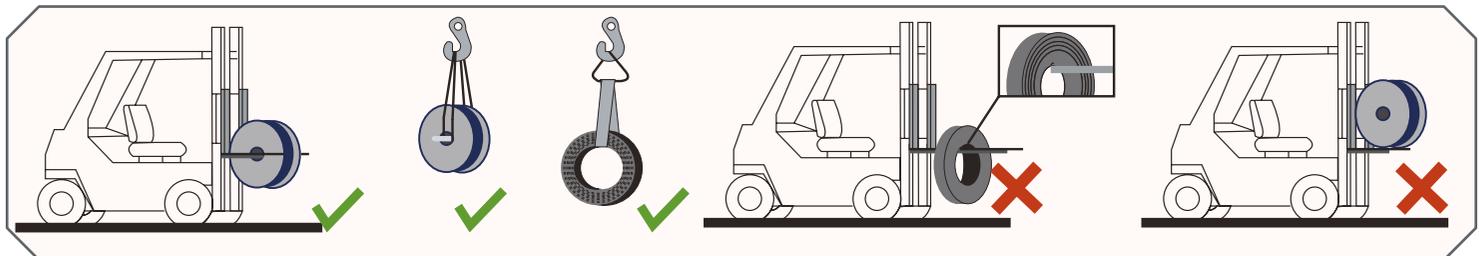

## Halatların Taşınması

### Transport of Ropes

Halatın makarada taşınması tercih edilmelidir. Makaranın güvenli bir şekilde taşınması için uygun araçlar kullanılmalıdır. Roda halindeki halatlar uygun polyester sapanlar ile taşınmalıdır. Halatın sert yüzeylere temasından kaçınılmalıdır. Şekilde görüldüğü gibi kendi ağırlığı üzerine binecek şekilde sevk edilmemelidir.

*Transport the rope preferably on a reel. Use suitable means for a safe transport of the reel. Coiled rope sections are best transported by means of a lifting belt. Avoid contact of the rope with hard surfaces. The ropes should not be loaded on their own weight.*

## Dönmez Halatlar

### Non-Rotating Wires

Özellikle dönmez halatların aktarma, uç kesme ve kullanım sırasında diğer halatlardan daha hassas olduğu unutulmamalıdır. Bu nedenle;

- ◇ Dönmez halatların her iki ucu kesilmeden önce mutlaka sıkıca bağlanmalıdır yada uygun bir makinayla kesilmelidir.
- ◇ Aktarma ve boy kesme işlemleri bu işe uygun aktarma makinalarında kurallara uygun bir şekilde yapılmalıdır.
- ◇ Kullanım sırasında ani yüklerin uygulanmasından kaçınılmalı ve halatın küçük çaplı makaralardan geçmemesi ve keskin köşelere sürmemesi sağlanmalıdır.
- ◇ Dönmez halatlar çalışırken ani yük boşaltması yapılmamalıdır.
- ◇ Dönmez halatlar yük altında diğer dış kuvvetlerin etkisi ile döndürülmemelidir.

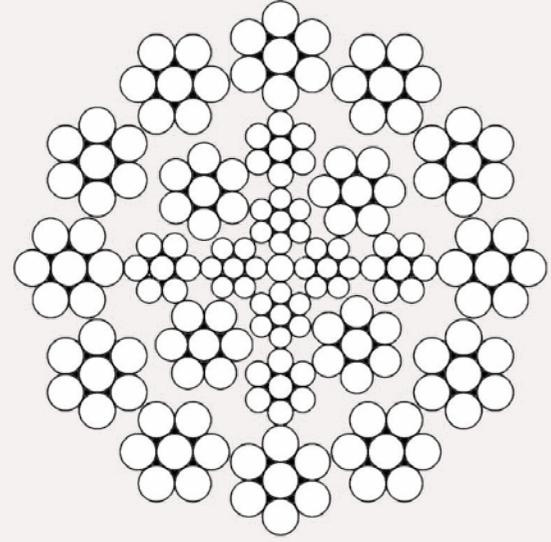

Non-rotating wires are more sensitive in terms of transfer, cut and usage. Therefore;

- ◇ Both ends should be tied tightly before cutting and should be cut by proper machines.
- ◇ Transfer and cut should be done by proper machines followed by regulations.
- ◇ Should not be loaded suddenly during use, used small diameter reels and contacted sharp corners.
- ◇ Should not be unloaded suddenly during use.
- ◇ Should not be rotated by external forces under load by external factors.

# Hukuki Esaslar

## Judicial Principles

Gözlü ve daire sapanlar için, teknik talepler ve imalat bilgileri, bütün Avrupa için EN 1492-1 ve 1492-2 normları ile tespit edilmiştir. Tekstil sapan araçlarının Avrupa normlarına uygunluğu CE işareti ile belirtilir.

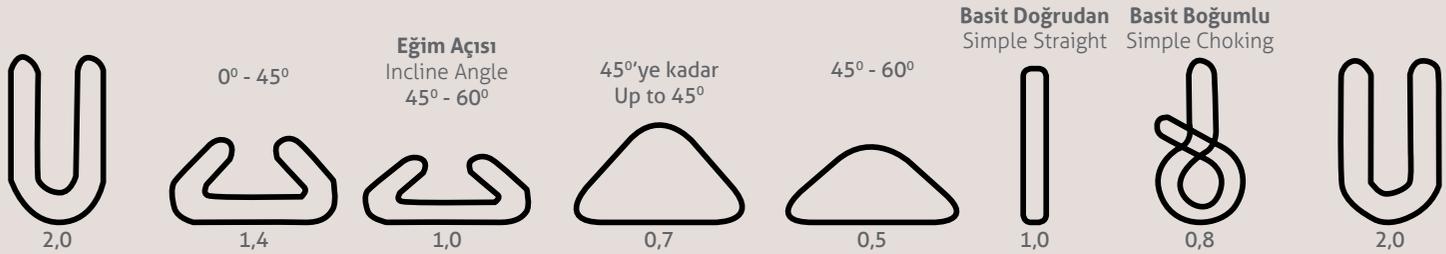

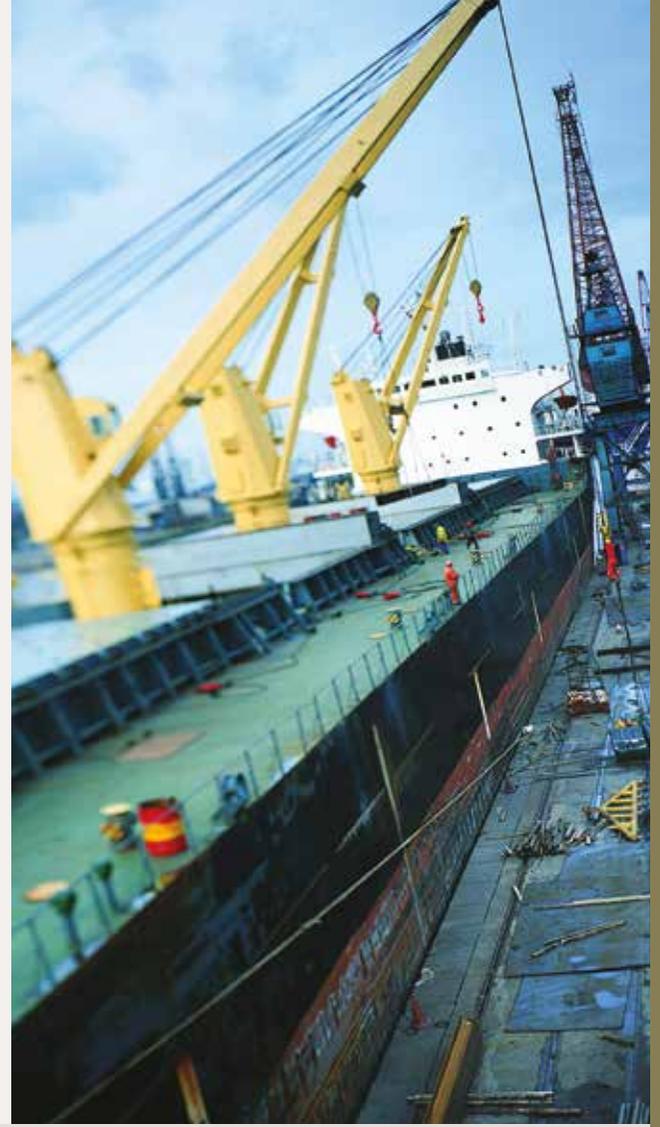

*Manufacturing norms and technical claim for eyed and rounded slings are detected by EN 1492-1 and 1492-2 according to Europe norms. The compatibility of fabric slings for Europe standards is indicated by CE marks.*

# Taşıma Kapasitesi ve Taşıma Katsayı Faktörü

## Loading Capacity and Loading Factor

Yükün ağırlığı ve bağlama şekli bağlama aracının taşıma kapasitesini belirler. Gözlü ve dairesel sapanlar için başlıca askı şekilleri aşağıdaki örneklerden alınabilir. Bir sapan aracının taşıma kapasitesi asılma şekline bağlı olarak değişiklik gösterir. Taşıma kapasitesinin değişimi yük sapan faktörü vasıtası ile belirlenir.

*The weigh of the load and binding form determines the binding tool's capacity. Below is the main hanging forms for eye slings and round slings. Changes in load capacity is determined by means of sling factor.*

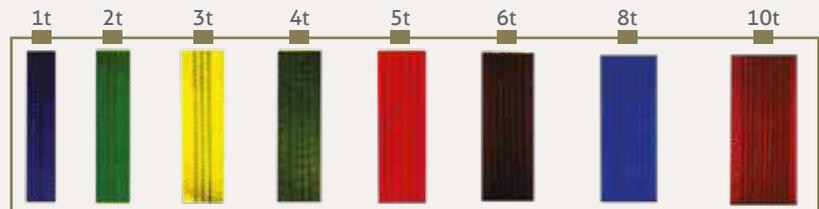

# Önemli

## Important

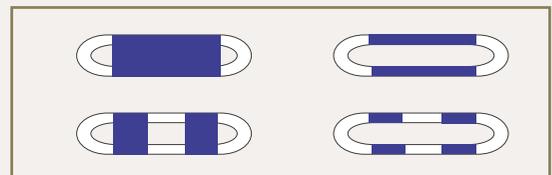

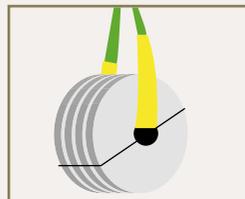

60° üzerindeki bir kol açısı ile sapan bağlantısına izin verilmemektedir. Bu değer üzerindeki bir kol açısında ortaya çıkan kuvvetlere hakim olunamamaktadır.

*It should not be allowed to bind a sling with an arm angle above 60°. The forces emerging above 60° cannot be controlled.*

Bu durum ayrıca 4 kollu zincir sapanlar içinde geçerli olmaktadır. Yukarıda belirtilen çalışma yük limitleri yalnızca yük dağılımının simetrik olduğu durumlarda geçerli olmaktadır. Ayrıca yayıcı levha (EAWI 1), DIN 15401'e göre 8'den 40'a kadar vinç kancaları için olan özel bağlantılar ile uygundur.

\* The mentioned working load limits are valid only in case of using two of 2-leg chain slings. In this case one of the 2-leg chain slings must be assembled with a spreader plate and both chain slings have to be assembled to the crane hook. This is valid also in case of a 4-leg chain sling. Where as 2 legs have to be assembled with a spreader plate. The above mentioned working load limits are valid only in case of a symmetric distribution of load. The spreader plate EAWI 1 is also available with special links for crane hooks no. 8 up to 40 acc. DIN 15401.

ENORM Grade 10 materyaller TWSK ile karşılaştırdığımızda firdöndünün ölçüsünü arttırmadan WLL'nin %25'i kadar bir artış sağlar.

### Avantajları:

- ◇ Firdöndü üzerindeki işaretler eğim açılarının açık bir göstergesidir.
- ◇ İlaveten rulman sistemi yük altında düzgün bir dönüğe izin verir.
- ◇ Halka üzerindeki çıkıntı bölümler halkayı bükülmekten korur.
- ◇ Güçlü Galv. kaplama sayesinde iç ve dış yüzeyler paslanmaya karşı korunmuştur.
- ◇ Özel mekanik işleme ile firdöndünün yüzey teması geliştirilmiştir.
- ◇ Rulmanın aşınması, aşınmış halkadaki boşluğa bakarak herhangi bir ölçüm yapmaya gerek kalmaksızın gözle tespit edilebilir.
- ◇ Tüm yük yönlerinde kırılmaya karşı 4 kat emniyetlidir.

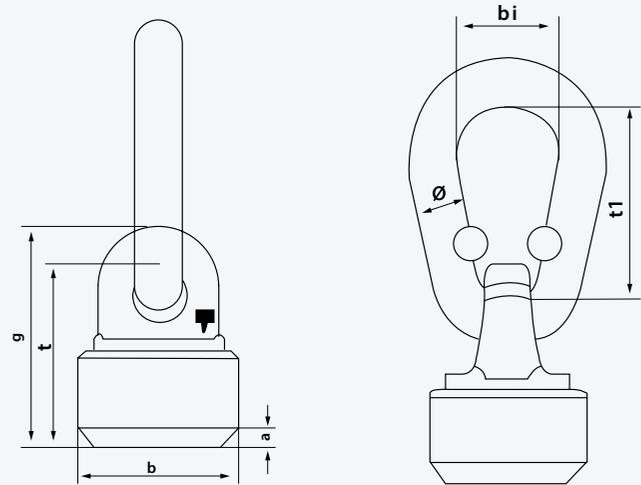

Grade 10 ENORM material allows for an increase in working load limit of 25% without increasing swivel size compared to TAWSK.

### The advantages:

- ◇ Marks on the swivel give a clear indication of inclination angels.
- ◇ Additional ball bearing system allows for smooth swiveling under load.
- ◇ Crimpfeature on the link prevents the link from kinking.
- ◇ Both internal and external surfaces are protected against corrosion by a tough galvanized coating.
- ◇ Improved swivel to surface contact is due to special machining.
- ◇ Ball bearing wear can be visually recognized by the gap on the wear ring without measuring instruments.
- ◇ Secured four times against breakage in all load directions.
